

Microsoft FY23 First Quarter Earnings Conference Call

Brett Iversen, Satya Nadella, Amy Hood

Tuesday, October 25, 2022

BRETT IVERSEN:

Good afternoon and thank you for joining us today. On the call with me are Satya Nadella, chairman and chief executive officer, Amy Hood, chief financial officer, Alice Jolla, chief accounting officer, and Keith Dolliver, deputy general counsel.

On the Microsoft Investor Relations website, you can find our earnings press release and financial summary slide deck, which is intended to supplement our prepared remarks during today's call and provides the reconciliation of differences between GAAP and non-GAAP financial measures.

On this call we will discuss certain non-GAAP items. The non-GAAP financial measures provided should not be considered as a substitute for or superior to the measures of financial performance prepared in accordance with GAAP. They are included as additional clarifying items to aid investors in further understanding the company's first quarter performance in addition to the impact these items and events have on the financial results.

All growth comparisons we make on the call today relate to the corresponding period of last year unless otherwise noted. We will also provide growth rates in constant currency, when available, as a framework for assessing how our underlying businesses performed, excluding the effect of foreign currency rate fluctuations. Where growth rates are the same in constant currency, we will refer to the growth rate only.

We will post our prepared remarks to our website immediately following the call until the complete transcript is available. Today's call is being webcast live and recorded. If you ask a question, it will be included in our live transmission, in the transcript, and in any future use of the recording. You can replay the call and view the transcript on the Microsoft Investor Relations website.

During this call, we will be making forward-looking statements which are predictions, projections, or other statements about future events. These statements are based on current expectations and assumptions that are subject to risks and uncertainties. Actual results could materially differ because of factors discussed in today's earnings press release, in the comments made during this conference call, and in the risk factor section of our Form 10-K, Forms 10-Q, and other reports and filings with the

Securities and Exchange Commission. We do not undertake any duty to update any forward-looking statement.

And with that, I'll turn the call over to Satya.

SATYA NADELLA:

Thank you, Brett.

To start, I want to outline the principles that are guiding us through these changing economic times:

First, we will invest behind categories that will drive the long-term secular trend, where digital technology as a percentage of the world's GDP will continue to increase.

Second, we will prioritize helping our customers get the most value out of their digital spend, so that they can do more with less.

And, finally, we will be disciplined in managing our cost structure.

With that context, this quarter, the Microsoft Cloud again exceeded \$25 billion in quarterly revenue, up 24 percent and 31 percent in constant currency.

And, based on current trends continuing, we expect our broader commercial business to grow at around 20 percent in constant currency this fiscal year, as we manage through the cyclical trends affecting our consumer business.

With that, let me highlight our progress, starting with Azure.

Moving to the cloud is the best way for organizations to do more with less today. It helps them align their spend with demand and mitigate risk around increasing energy costs and supply chain constraints.

We're also seeing more customers turn to us to build and innovate with infrastructure they already have.

With Azure Arc, organizations like Wells Fargo can run Azure services – including containerized applications – across on-premises, edge, and multi-cloud environments.

We now have more than 8,500 Arc customers, more than double the number a year ago. We are the platform of choice for customers' SAP workloads in the cloud. Companies like Chobani, Munich RE, Sodexo, Volvo Cars all run SAP on Azure.

We are the only cloud provider with direct and secure access to Oracle databases running in Oracle Cloud Infrastructure, making it possible for companies like FedEx, GE, and Marriott to use capabilities from both companies.

And, with Azure Confidential Computing, we're enabling companies in highly regulated industries, including RBC, to bring their most sensitive applications to the cloud.

Just last week, UBS said it will move more than 50 percent of its applications to Azure.

Now, to data and AI.

With our Microsoft Intelligent Data Platform, we provide a complete data fabric, helping customers cut "integration tax" associated with bringing together siloed solutions.

Customers like Mercedes-Benz are standardizing on our data stack to process and govern massive amounts of data. Cosmos DB is the go-to database powering the world's most-demanding workloads, at limitless scale.

Cosmos DB now supports PostgreSQL, making Azure the first cloud provider to offer a database service that supports both relational and NoSQL workloads.

And, in AI, we are turning the world's most advanced models into platforms for customers.

Earlier this month, we brought the power of Dall-E to Azure OpenAI service, helping customers like Mattel apply the breakthrough image generation model to commercial use cases for the first time.

And Azure Machine Learning provides industry leading MLOps, helping organizations like 3M deploy, manage, and govern models.

All-up, Azure ML revenue has increased more than 100 percent for four quarters in a row.

Now, on to developers.

We have the most complete platform for developers to build cloud-native applications.

Four years since our acquisition, GitHub is now at \$1 billion in annual recurring revenue. And GitHub's developer-first ethos has never been stronger. More than 90 million people now use the service to build software for any cloud and any platform, up 3 times.

GitHub Advanced Security is helping organizations improve their security posture by bringing features directly into developers' workflows.

Toyota North America chose the offering this quarter to help its developers build and secure many of its most critical applications.

Now, on to Power Platform.

We're helping customers save time and money with our end-to-end suite, spanning low-code/no-code tools, robotic process automation, virtual agents, and business intelligence.

Power BI is the market leader in business intelligence in the cloud and is growing faster than competition, as companies like Walmart standardize on the tool for reporting and analytics.

Power Apps is the market leader in low-code/no-code tools and has nearly 15 million monthly active users, up more than 50 percent compared to a year ago.

Power Automate has over 7 million monthly active users, and is being used by companies like Brown-Forman, Komatsu, Mars, T-Mobile to digitize manual business processes and save thousands of hours of employee time.

And we're going further, with new AI-powered capabilities in Power Automate that turn natural language into advanced workflows.

Now, on to Dynamics 365.

From customer experience and service, to finance and supply chain, we continue to take share across all categories we serve. For example, Lufthansa Cargo chose us to centralize customer information and related shipments.

CBRE is optimizing its field service operations, gaining cost efficiencies. Darden is using our solutions to increase both guest frequency and spend at its restaurants. And, Tillamook is scaling its growth and improving supply chain visibility.

All-up, more than 400,000 organizations now use our business applications.

Now, on to industry solutions.

We're seeing increased adoption of our industry and cross-industry clouds.

Bank of Queensland chose our Cloud for Financial Services to deliver new digital experiences for its customers. Our Cloud for Sustainability is off to a fast start, as organizations like Telstra use the solution to track their environmental footprint.

New updates provide insights on hard to measure Scope 3 carbon emissions.

And we're seeing record growth in healthcare, driven in part by our Nuance DAX ambient intelligence solution, which automatically documents patient encounters at the point of care.

Physicians tell us DAX dramatically improves their productivity, and it's quickly becoming an on-ramp to our broader healthcare offerings.

Now, on to new systems of work.

Microsoft 365, Teams, and Viva uniquely enable employees to thrive in today's digitally connected, distributed world of work.

Microsoft 365 is the cloud-first platform that supports all the ways people work and every type of worker, reducing cost and complexity for IT.

The new Microsoft 365 app brings together our productivity apps with third-party content, as well as personalized recommendations.

Microsoft Teams is the de facto standard for collaboration and has become essential to how hundreds of millions of people meet, call, chat, collaborate, and do business.

As we emerge from the pandemic, we are retaining users we've gained and are seeing increased engagement too.

Users interact with Teams 1,500 times per month on average.

In a typical day, the average commercial user spends more time in Teams chat than they do in e-mail, and the number of users who use four or more features within Teams increased over 20 percent year over year.

Teams is becoming a ubiquitous platform for business process.

Monthly active enterprise users running third party and custom applications within Teams increased nearly 60 percent year over year.

And, over 55 percent of our enterprise customers who use Teams today also buy Teams Rooms or Teams Phone.

Teams Phone provides the best in class calling. PSTN users have grown by double-digits for five quarters in a row.

We're bringing Teams Rooms to a growing hardware ecosystem, including Cisco's devices and peripherals, which will now run Teams natively.

And we're creating a new category with Microsoft Places to help organizations evolve and manage their space for hybrid and in-person work.

Just like Outlook calendar orchestrates *when* people can meet and collaborate, Places will do the same for *where*.

We also announced Teams Premium, addressing enterprise demands for advanced meeting features, like additional security options and intelligent meeting recaps.

All this innovation is driving growth across Microsoft 365.

Leaders in every industry, from Fannie Mae and Land O'Lakes to Rabobank, continue to turn to our premium E5 offerings for advanced security, compliance, voice, and analytics.

We've also built a completely new suite with our employee experience platform Microsoft Viva, which now has more than 20 million monthly active users at companies like Finastra, SES, and Unilever.

And, we're extending Viva to meet role-specific needs. Viva Sales is helping salespeople at companies like Adobe, Crayon, and PwC reclaim their time by bringing customer interactions across Teams and Outlook directly into their CRM system.

Now, on to Windows.

Despite the drop in PC shipments during the quarter, Windows continues to see usage growth.

All-up, there are nearly 20 percent more monthly active Windows devices than pre-pandemic.

And, on average, Windows 10 and Windows 11 users are spending 8.5 percent more time on their PCs than they were two and a half years ago.

And, we're seeing larger commercial deployments of Windows 11.

Accenture, for example, has deployed Windows 11 to more than 450,000 employee PCs, up from just 25,000 seven months ago, and L'Oreal has deployed the operating system to 85,000 employees.

Now, on to security.

Security continues to be a top priority for every organization.

We are the only company with integrated, end-to-end tools spanning security, compliance, identity, and device management, and privacy across all clouds and platforms.

More than 860,000 organizations across every industry – from BP and Fujifilm, to ING Bank, iHeart Media, and Lumen Technologies – now use our security solutions, up 33 percent year over year.

They can save up to 60 percent when they consolidate on our security stack, and the number of customers with more than 4 workloads have increased 50 percent year over year.

More organizations are choosing both our XDR and cloud-native SIEM to secure their entire digital estate.

The number of E5 customers who also purchased Sentinel increased 44 percent year over year.

And as threats become more sophisticated, we're innovating to protect customers.

New capabilities in Defender help secure the entire DevOps lifecycle and manage security posture across clouds.

And Entra now provides comprehensive identity governance for both on-premises and cloud-based user directories.

Now, on to LinkedIn.

We once again saw record engagement among our more than 875 million members, with international growth increasing at nearly 2X the pace as in the United States.

There are now more than 150 million subscriptions to newsletters on LinkedIn, up 4X year over year.

New integrations between Viva and LinkedIn Learning help companies invest in their existing employees by providing access to courses directly in the flow of work.

Members added 365 million skills to their profiles over the last 12 months, up 43 percent year over year.

And with our acquisition of EduBrite, they will also soon be able to earn professional certificates from trusted partners directly on the platform.

We launched the next generation Sales Navigator this quarter, helping sellers increase win rates and deal size by better understanding and evaluating customer interest.

Finally, LinkedIn Marketing Solutions continues to provide leading innovation and ROI in B2B digital advertising.

More broadly, with Microsoft Advertising, we offer a trusted platform for any marketer or advertiser looking to innovate.

We've expanded our geographies we serve by nearly 4X over the past year.

We're seeing record daily usage of Edge, Start, and Bing, driven by Windows.

Edge is the fastest growing browser on Windows and continues to gain share as people use built-in coupon and price comparison features to save money.

We've surfaced more than \$2 billion in savings to date, and this quarter, we brought our shopping tools to 15 new markets.

Users of our Start personalized content feed are consuming 2X more content, compared to a year ago.

And we're also expanding our third-party ad inventory.

Netflix will launch its first ad-supported subscription plan next month, exclusively powered by our technology and sales.

And, with Promote IQ, we offer an omnichannel media platform for retailers like Otto Group looking to generate additional revenue, while maintaining ownership of their own data and customer relationships.

Now, on to gaming.

We're adding new gamers to our ecosystem, as we execute on our ambition to reach players wherever and whenever they want, on any device.

We saw usage growth across all platforms, driven by strength off-console.

PC Game Pass subscriptions increased 159 percent year over year. And with Cloud Gaming, we're transforming how games are distributed, played, and viewed.

More than 20 million people have used the service to stream games to date.

And we're adding support for new devices, like handhelds from Logitech and Razer, as well as Meta Quest.

And, as we look towards the holidays, we offer the best value in gaming, with Game Pass, and Xbox Series S.

Nearly half of the Series S buyers are new to our ecosystem.

In closing, in a world facing increasing headwinds, digital technology is the ultimate tailwind.

And we're innovating across the entire tech stack to help every organization, while also focusing intensely on our operational excellence and execution discipline.

With that, I'll hand it over to Amy.

AMY HOOD:

Thank you, Satya, and good afternoon everyone. Our first quarter revenue was \$50.1 billion, up 11 percent and 16 percent in constant currency. Earnings per share was \$2.35 – and increased 4 percent and 11 percent in constant currency, when adjusted for the net tax benefit from the first quarter of fiscal year 22.

Driven by strong execution in a dynamic environment, we delivered a solid start to our fiscal year, in line with our expectations, even as we saw many of the macro trends from the end of the fourth quarter continue to weaken thru Q1.

In our consumer business, PC market demand further deteriorated in September, which impacted our Windows OEM and Surface businesses. And reductions in customer advertising spend, which also weakened later in the quarter, impacted Search and news advertising and LinkedIn Marketing Solutions.

As you heard from Satya, in our commercial business, we saw strong overall demand for our Microsoft Cloud offerings, with growth of 31 percent in constant currency as well as share gains across many businesses. Commercial bookings declined 3 percent and increased-16 percent in constant currency on a flat expiry base. Excluding the FX impact, growth was driven by strong renewal execution and we continued to see growth in the number of large, long-term Azure and Microsoft 365 contracts across all deal sizes. More than half of the 10-million-dollar-plus Microsoft 365 bookings came from E5.

Commercial remaining performance obligation increased 31 percent and 34 percent in constant currency to \$180 billion. Roughly 45 percent will be recognized in revenue in the next 12 months, up 23 percent year-over-year. The remaining portion, which will be recognized beyond the next 12 months, increased 38 percent year-over-year. And our annuity mix increased 1 point year-over-year to 96 percent.

FX impacted company results in line with expectations. With the stronger US dollar, FX decreased total company revenue by 5 points. And at a segment level, FX decreased Productivity and Business Processes and Intelligent Cloud revenue growth by 6 points, and More Personal Computing revenue growth by 3 points. Additionally, FX decreased COGS and operating expense growth by 3 points.

Microsoft Cloud gross margin percentage increased roughly 2 points year-over-year to 73 percent. Excluding the impact of the change in accounting estimate for useful lives, Microsoft Cloud gross margin percentage decreased roughly 1 point driven by sales mix shift to Azure and lower Azure margin, primarily due to higher energy costs.

Company gross margin dollars increased 9 percent and 16 percent in constant currency and gross margin percentage decreased slightly year-over-year to 69 percent. Excluding the impact of the latest change in accounting estimate, gross margin percentage decreased roughly 3 points driven by sales mix shift to cloud, the lower Azure margin noted earlier, and Nuance.

Operating expense increased 15 percent and 18 percent in constant currency driven by investments in cloud engineering, LinkedIn, Nuance and commercial sales. At a total company level, headcount grew 22 percent year-over-year as we continued to invest in key areas just mentioned, as well as customer deployment. Headcount growth included roughly 6 points from the Nuance and Xandr acquisitions, which closed last Q3 and Q4, respectively.

Operating income increased 6 percent and 15 percent in constant currency. And operating margins decreased roughly 2 points year-over-year to 43 percent. Excluding the impact of the change in accounting estimate, operating margins declined roughly 4 points year-over-year driven by sales mix shift to cloud, unfavorable FX impact, Nuance, and the lower Azure margin noted earlier.

Now to our segment results.

Revenue from Productivity and Business Processes was \$16.5 billion and grew 9 percent and 15 percent in constant currency, ahead of expectations with better-than-expected results in Office commercial and LinkedIn.

Office commercial revenue grew 7 percent and 13 percent in constant currency. Office 365 commercial revenue increased 11 percent and 17 percent in constant currency, slightly better than expected with the strong renewal execution noted earlier. Growth was driven by installed base expansion across all workloads and customer segments, as well as higher ARPU from E5. Demand for security, compliance, and voice value in Microsoft 365 drove strong E5 momentum again this quarter. Paid Office 365 commercial seats grew 14 percent year-over-year, driven by our small and medium business and frontline worker offerings – although we saw continued impact of new deal moderation outside of E5.

Office consumer revenue grew 7 percent and 11 percent in constant currency driven by continued momentum in Microsoft 365 subscriptions, which grew 13 percent to 61.3 million.

Dynamics revenue grew 15 percent and 22 percent in constant currency driven by Dynamics 365, which grew 24 percent and 32 percent in constant currency.

LinkedIn revenue increased 17 percent and 21 percent in constant currency, ahead of expectations driven by better-than-expected growth in Talent Solutions partially offset by weakness in Marketing Solutions from the advertising trends noted earlier.

Segment gross margin dollars increased 11 percent and 18 percent in constant currency and gross margin percentage increased roughly 1 point year-over-year. Excluding the impact of the latest change in accounting estimate, gross margin percentage decreased slightly driven by sales mix shift to cloud offerings. Operating expense increased 13 percent and 16 percent in constant currency, and operating income increased 10 percent and 19 percent in constant currency, including 4 points due to the latest change in accounting estimate.

Next, the Intelligent Cloud segment. Revenue was \$20.3 billion, increasing 20 percent and 26 percent in constant currency, in line with expectations.

Overall, server products and cloud services revenue increased 22 percent and 28 percent in constant currency. Azure and other cloud services revenue grew 35 percent and 42 percent in constant currency, about a point lower than expected – driven by the continued moderation in Azure consumption growth, as we help customers optimize current workloads while they prioritize new workloads.

In our per-user business, the enterprise mobility and security installed base grew 18 percent to over 232 million seats with continued impact from the new deal moderation noted earlier.

In our on-premises server business, revenue was flat and increased 4 percent in constant currency, slightly ahead of expectations – driven by hybrid demand including better-than-expected annuity purchasing ahead of the SQL Server 2022 launch.

Enterprise Services revenue grew 5 percent and 10 percent in constant currency, driven by Enterprise Support Services.

Segment gross margin dollars increased 20 percent and 26 percent in constant currency and gross margin percentage decreased slightly.

Excluding the impact of the latest change in accounting estimate, gross

margin percentage declined roughly 3 points driven by sales mix shift to Azure and higher energy costs impacting Azure margins. Operating expenses increased 25 percent and 28 percent in constant currency, including roughly 8 points of impact from Nuance, and operating income grew 17 percent and 25 percent in constant currency, with roughly 9 points of favorable impact from the latest change in accounting estimate.

Now to More Personal Computing. Revenue decreased slightly year-over-year to \$13.3 billion, and grew 3 percent in constant currency, in line with expectations overall, but with OEM and Surface weakness offset by upside in Gaming consoles.

Windows OEM revenue decreased 15 percent year-over-year. Excluding the impact from the Windows 11 deferral last year, revenue declined 20 percent driven by PC market demand deterioration noted earlier.

Devices revenue grew 2 percent and 8 percent in constant currency, in line with expectations, driven by the impact of a large HoloLens deal, partially offset by low double-digit declines in consumer Surface sales.

Windows commercial products and cloud services revenue grew 8 percent and 15 percent in constant currency, in line with expectations, driven by demand for Microsoft 365 E5 noted earlier.

Search and news advertising revenue ex-TAC, increased 16 percent and 21 percent in constant currency, in line with expectations, benefitting from an increase in search volumes and roughly 5 points of impact from Xandr even as we saw increased ad market headwinds during September. Edge browser gained share again this quarter.

And in Gaming, revenue grew slightly and was up 4 percent in constant currency, ahead of expectations driven by better-than-expected console sales. Xbox hardware revenue grew 13 percent and 19 percent in constant currency. Xbox content and services revenue declined 3 percent and increased 1 percent in constant currency, driven by declines in first-party content as well as in third-party content, where we had lower engagement hours and higher monetization, partially offset by growth in Xbox Game Pass subscriptions.

Segment gross margin dollars declined 9 percent and 4 percent in constant currency and gross margin percentage decreased roughly 5 points year-

over-year driven by sales mix shift to lower margin businesses. Operating expenses increased 2 percent and 5 percent in constant currency, driven by the Xandr acquisition, and operating income decreased 15 percent and 9 percent in constant currency.

Now back to total company results.

Capital expenditures including finance leases were \$6.6 billion and cash paid for P, P, and E was \$6.3 billion. Our data center investments continue to be based on strong customer demand and usage signals.

Cash flow from operations was \$23.2 billion, down 5 percent year-over-year driven by strong cloud billings and collections which were more than offset by a tax payment related to the transfer of intangible property completed in Q1 FY22. Free cash flow was \$16.9 billion, down 10 percent year-over-year. Excluding the impact of this tax payment, cash flow from operations grew 2 percent and free cash flow was relatively unchanged year-over-year.

This quarter, other income and expense was \$54 million driven by interest income which was mostly offset by interest expense and net losses on foreign currency remeasurement.

Our effective tax rate was approximately 19 percent.

And finally, we returned \$9.7 billion to shareholders through share repurchases and dividends.

Now, moving to our Q2 outlook, which unless specifically noted otherwise, is on a US dollar basis.

My commentary, for both the full year and next quarter, does not include any impact from Activision, which we still expect to close by the end of the fiscal year.

First, FX. With the stronger US dollar and based on current rates, we now expect FX to decrease total revenue growth by approximately 5 points and to decrease total COGS and operating expense growth by approximately 3 points. Within the segments, we anticipate roughly 7 points of negative FX impact on revenue growth in Productivity and Business Processes, 6 points in Intelligent Cloud and 3 points in More Personal Computing.

Our outlook has many of the trends we saw at the end of Q1 continue into Q2. In our consumer business, materially weaker PC demand from September will continue and impact both Windows OEM and Surface device results even as the Windows installed base and usage grows, as you heard from Satya. Additionally, customers focusing their advertising spend will impact LinkedIn and Search and news advertising revenue.

In our commercial business demand for our differentiated hybrid and cloud offerings together with consistent execution should drive healthy growth across the Microsoft Cloud.

In commercial bookings, continued strong execution across core annuity sales motions and commitments to our platform should drive solid growth on a moderately growing expiry base, against a strong prior year comparable which included a significant volume of large, long-term Azure contracts. As a reminder, the growing mix of larger long-term Azure contracts, which are more unpredictable in their timing, always drives increased quarterly volatility in our bookings growth rate.

Microsoft Cloud gross margin percentage should be up roughly 1 point year-over-year driven by the latest accounting estimate change noted earlier. Excluding that impact, Q2 gross margin percentage will decrease

roughly 2 points driven by lower Azure margin primarily due to higher energy costs, revenue mix shift to Azure, and the impact from Nuance.

In capital expenditures, we expect a sequential increase on a dollar basis with normal quarterly spend variability in the timing of our cloud infrastructure buildout.

Next to segment guidance.

In Productivity and Business Processes, we expect revenue to grow between 11 and 13 percent in constant currency or \$16.6 to \$16.9 billion US dollars.

In Office Commercial, revenue growth will again be driven by Office 365 with seat growth across customer segments and ARPU growth thru E5. We expect Office 365 revenue growth to be similar to last quarter on a constant currency basis. In our on-premises business we expect revenue to decline in the low-to-mid 30s.

In Office consumer, we expect revenue to decline low to mid-single digits, as Microsoft 365 subscription growth will be more than offset by unfavorable FX impact.

For LinkedIn, we expect continued strong engagement on the platform although results will be impacted by a slowdown in advertising spend and hiring resulting in mid-to- high-single-digits revenue growth or low to mid-teens growth in constant currency.

And in Dynamics, we expect revenue growth in the low-double-digits or the low 20s in constant currency driven by continued share gains in Dynamics 365.

For Intelligent Cloud we expect revenue to grow between 22 and 24 percent in constant currency or \$21.25 to \$21.55 billion US dollars.

Revenue will continue to be driven by Azure which, as a reminder, can have quarterly variability primarily from our per-user business and from in-period revenue recognition depending on the mix of contracts.

We expect Azure revenue growth to be sequentially lower by roughly 5 points on a constant currency basis. Azure revenue will continue to be driven by strong growth in consumption with some impact from the Q1

trends noted earlier. And our per-user business should continue to benefit from Microsoft 365 suite momentum, though we expect moderation in growth rates given the size of the installed base.

In our on-premises server business, we expect revenue to decline low-single digits as demand for our hybrid solutions including strong annuity purchasing from the SQL Server 2022 launch, will be more than offset by unfavorable FX impact.

And in Enterprise Services, we expect revenue growth to be in the low-single digits driven by Enterprise Support.

In More Personal Computing, we expect revenue of \$14.5 to \$14.9 billion US dollars.

In Windows OEM we expect revenue to decline in the high 30s. Excluding the impact from the Windows 11 revenue deferral last year, revenue would decline mid-30s reflecting both PC market demand and a strong prior year comparable, particularly in the commercial segment.

In Devices, revenue should decline approximately 30 percent, again roughly in line with the PC market.

In Windows commercial products and cloud services, customer demand for Microsoft 365 and our advanced security solutions should drive growth in the mid-single digits or low double digits in constant currency.

Search and news advertising ex-TAC should grow in the low-to-mid teens, roughly 6 points faster than overall Search and news advertising revenue, driven by growing first party revenue and the inclusion of Xandr.

And in Gaming, we expect revenue to decline in the low-to-mid teens against a strong prior year comparable that included several first-party title launches, partially offset by growth in Xbox Game Pass subscribers. We expect Xbox content and services revenue to decline in the low-to-mid-teens.

Now back to company guidance.

We expect COGS to grow between 6 and 7 percent in constant currency or to be between \$17.4 and \$17.6 billion US dollars and operating expense to

grow between 17 and 18 percent in constant currency or to be between \$14.3 and \$14.4 billion US dollars. As we continue to focus our investment in key growth areas, total headcount growth sequentially should be minimal.

Other income and expense should be roughly \$100 million as interest income is expected to more than offset interest expense. Further FX and equity movements thru Q2 are not reflected in this number. And as a reminder, we are required to recognize mark-to-market gains or losses on our equity portfolio, which can increase quarterly volatility.

And we expect our Q2 effective tax rate to be between 19 and 20 percent.

And finally, as a reminder for Q2 cash flow, we expect to make a 2.4-billion-dollar cash tax payment related to the capitalization of R&D provision enacted in the 2017 TCJA and effective as of July 1, 2022.

Now some thoughts on the full fiscal year.

First, FX. Based on current rates, we now expect a roughly 5-point headwind to full year revenue growth. And FX should decrease COGS and operating expense growth by approximately 3 points.

At the total company level, we continue to expect double-digit revenue and operating income growth on a constant currency basis. Revenue will be driven by around 20 percent constant currency growth in our commercial business driven by strong demand for our Microsoft Cloud offerings. That growth will be partially offset by the increased declines we now see in the PC market.

With the high margins in our Windows OEM business and the cyclical nature of the PC market, we take a long-term approach to investing in our core strategic growth areas and maintain these investment levels regardless of PC market conditions. Therefore, with our first quarter results and lower expected OEM revenue for the remainder of the year as well as over \$800 million of greater than expected energy costs, we now expect operating margins in US dollars to be down roughly a point year-over-year. On a constant currency basis, excluding the incremental impact of the lower Windows OEM revenue and the favorable impact from the latest accounting change, we continue to expect FY23 operating margins to be roughly flat year-over-year.

In closing, in this environment it is more critical than ever to continue to invest in our strategic growth markets such as Cloud, security, Teams, Dynamics 365, and LinkedIn where we have opportunities to continue to gain share as we provide problem-solving innovations to our customers.

And while we continue to help our customers do more with less, we will do the same internally, and you should expect to see our operating expense growth moderate materially thru the year while we focus on growing productivity of the significant headcount investments we've made over the last year.

With that, let's go to Q&A Brett?

BRETT IVERSEN: Thanks, Amy. We'll now move over to Q&A. Out of respect for others on the call, we request that participants please ask only one question. Jessi, can you please repeat your instructions?

(Operator Direction.)

KEITH WEISS, Morgan Stanley: Excellent. Thank you, guys for taking the question, and impressive results in what is obviously a very difficult environment. A question for Amy, and it pains me to ask a question about a percentage point, but I think this is what's on a lot of investors' minds, is this is two quarters in a row now where Azure constant currency growth

came in a little bit below your guidance. And I think what investors are worrying about or sort of wondering about is there an inherent volatility in that business that's just harder to forecast?

And on a go-forward basis, how should we think about that forecast? Have you applied more conservatism in it? And how should we think about Azure growth, like the glide path for the full year? If you could address those, I think it would put a lot of investor minds at ease.

AMY HOOD: Thanks, Keith, and I do appreciate you asking about that one point, because I do know it is a point of focus every quarter. And what I would say is there is some inherent volatility to that number. A point here or there, and you've heard me say it when we've been a point better, and you've heard me say it when we've been a point worse.

And I want to focus mostly on what and how we see the number, which is that it is still a very large growth rate with growth across all segments and with growth across all geos. That was, to the question, generally in line with where we expected. And what we did see through the quarter is a real focus both by customers, but also by our sales and customer success teams on going proactively to customers and making sure we are helping them optimize their workloads.

And as we went through the quarter and as, of course, the macroeconomic environment got more complicated, we continued to focus on that, because ultimately, those optimizations bring value even as budgets are

still growing and budgeted spend is still growing. And so, it's this nuance of you're still seeing digitization. This is still the tailwind that helps customers solve problems. This is still the way to build growth and leverage in your business. And yet, you still want to optimize your workloads. You still want to run them the most efficiently so that you can then make room for new workload growth.

We saw that across all segments. If there was one segment where I may have seen it a bit more, I would say, in the small or mid-sized segment of the market, that tends to be more through partner. We rely on partners to help customers do those same optimizations and prepare workloads. But it is that one point I know that people are focused on.

But if you step back and say, this is how you drive ultimate share gains, and build customer loyalty and help customers grow, I think that needs to be the focus of our teams inside the company, and also the partners that we rely on to help customers do that as well.

And so, as I look forward, there is some inherent volatility to this number. And here, I think you will hear us talk about continuing to invest to make that happen, whether it's in customer success, whether it's in optimizations, whether it's, frankly, in engineering to help people be able to even have better solutions to optimize against. I do think that will remain top of mind for us, even as this remains probably the most exciting opportunity and TAM across infra, data and AI that exist in tech and technology.

I don't know, Satya, if you –

SATYA NADELLA: Yeah. I mean, I think that that's the only thing I would add, Amy, to your point, is that obviously, our investment profile here is that this is the largest TAM where we, on a large number, have good growth rates with the kind of volatility you're seeing. So, we're going to stay focused on it. And in this particular period, I think we are going to optimize for long-term customer loyalty by proactively helping them optimize this spend, which I think is the right thing for us to be doing, as a company on behalf of our shareholders, long term.

KEITH WEISS, Morgan Stanley: Outstanding. Thank you, guys.

BRETT IVERSEN: Thanks, Keith. Jessi, next question, please.

(Operator Direction.)

MARK MOERDLER, Bernstein: Thank you. I'd like to follow up on the last question on Azure specifically. So next quarter, you're guiding to sequential, further slowing in the business. Is that the factor of optimization? Is it something else that's going on in here? How should we think about that, that specific component of the guidance, given the fact that you've got good bookings, strong RPO grow, etcetera?

AMY HOOD: Thanks, Mark. You're right and let me go ahead and reiterate part of that, which is that this quarter, as you saw, we did have very good bookings growth. And within the RPO number that you're referring to, we had good what we would call long dated growth, which means we're having and seeing customers continue to sign commitments to the platform.

And that goes really to what Satya mentioned, is that the plans to invest here remain intact. And so, it's about both the optimization that you're talking about, and we are seeing, and the guide includes that, and it also includes new workflows starting. And those also may not be matched up, one to one, to see sort of a consistent pattern. And that does result in some volatility.

The other piece of it, Mark, that we didn't talk on before because I was really focused on consumption, is that there per-user headwinds as well, right, because we're getting, seeing some of these laws of large numbers, in terms of the per-seat business.

So, there's a couple of things going on here, Mark, against, as you said, a very large base. It's not just the optimization to new workloads. It's also some per-user work as well.

MARK MOERDLER, Bernstein: Okay. Thank you. I appreciate it.

BRETT IVERSEN: Thanks, Mark. Jessi, next question, please.

(Operator Direction.)

BRENT THILL, Jefferies: Amy, last quarter you called out for the first time SMB weakness. It sounds like that continued. I think many are questioning, did that get worse this quarter? And did you see it filter now into the enterprise? Can you talk about what you're seeing higher up above SMB?

AMY HOOD: Thanks, Brent. Maybe this is a chance to talk a little bit about Microsoft 365. I think that's a place where we can talk specifically about the SMB market, because we did see continued impact there in Q1, although it was not different than what we saw, frankly, in Q4.

In Microsoft 365, what you saw was very good renewal execution. And it speaks to, I think, the value people are seeing in Microsoft. 365. We had on-time renewals that were, frankly, better in Q1, based on expirations, than we'd seen a year ago. So deals are both getting done and I think getting done on time but getting done within a discount range that we feel good about, that's consistent. And we saw good upsell to E5. So if you think about that as sort of forming the basis of what are we seeing above SMB, that's a good summary.

Where we in fact saw – I think we talked about it – new deal moderation, I'd referred to that, frankly, in Q4 as well, it tended to be in, to your point, the smaller end of the market, small-to-midsize companies, and it also tended to be through partner, which we had talked about before, Brent, a little bit

and I'd refer to. And it tended to be around selling what is, in fact, some new value that we've put into E3.

This is a place where there is some macro impact, but there's also, I think, a better job we can do in our E3 SKU, which is really a core value proposition. We added a lot of value to that SKU in Q4 in terms of security and auto patching for Windows. It's a great value in the same way E5 is. We land the E5 really well. We've got some work to do on landing E3.

So, there is some macro. It seems pretty consistent, frankly, more than inconsistent with what we saw. And there is some execution that I think, frankly, we can get better at as well.

BRENT THILL, Jefferies: Thank you.

BRETT IVERSEN: Thanks, Brent. Jessi, next question, please.

(Operator Direction.)

MARK MURPHY, JP Morgan: Yes, Thank you very much. Satya, this quarter, we're seeing an inflection in many of your AI breakthroughs. I'm thinking of GitHub Copilot and the image generation in your designer product. What is it that's enabling you to innovate so rapidly and essentially to be first to market? I'm wondering if it's the OpenAI relationship or maybe some of your inferencing capabilities, or something else.

And then as a quick follow-up, Amy, you did mention the lower margins in Azure due to the higher energy costs. Are you inferring that we can kind of

dimensionalize that incremental impact at something like 200 million per quarter? And then is there anything you can do to try to manage that through this period?

SATYA NADELLA: Thanks for the question. First, yes, the OpenAI partnership is a very critical partnership for us. Perhaps it's sort of important to call out that we build the supercomputing capability inside of Azure, which is highly differentiated the way compute and the network, in particular, come along, come together in order to support these largescale training of these platform models or foundation models has been very critical. That's what's driven, in fact, the progress OpenAI has been making. And of course, we then productize it as part of Azure OpenAI Services. And that's what we're seeing both be used by our own first-party applications, whether it's the GitHub Copilot or designer even inside Edge, and then of course the third party, like Mattel.

And so, we're very excited about it. We have a lot, sort of more to talk about when it comes to GitHub universe. I think you'll see more advances on GitHub Copilot, which is off to a fantastic start. But overall, this is an area of huge investment. The AI moment clearly has arrived and it's going to be part of every product, whether it's – in fact, you mentioned our Power Platform, because that's another area where we're innovating in terms of incorporating all of these AI models.

Yeah, so I think AI is a place where I think we have differentiated capability at an infrastructure layer for training and inference. And the model themselves are platforms for third parties. And our first-party applications are getting better because of the use of those AI models.

AMY HOOD: And to your question on energy costs, let me try to provide a little bit of help there. We did not see as big of that. As I said, it's over 800 for the year. Some of that was in Q1, but the majority of it will be in Q2 through 4. And I think if you want to think about it as somewhere, 250-ish a quarter. It's not exact, but that would be a decent assumption for the remainder of the year.

MARK MURPHY, JP Morgan: Thank you.

BRETT IVERSEN: Thanks, Mark. Jessi, next question, please.

(Operator Direction.)

KARL KEIRSTEAD, UBS: Okay, great. Amy, I've love to just ask you around margins. Clearly, you're experiencing a little bit more sales mix, given the weakness on the Windows side. It looks like you've elected not to throttle back OpEx to enable you to meet the three-months-ago guidance for flat margins, so they'll now drift a little bit lower. Do you mind talking through that decisions? Why not throttle back OpEx as a counter to that Windows pressure?

AMY HOOD: Thanks, Karl, and I shared a little bit on the call, but let me share a little more because I think it's important in terms of how we think about investment and continuing to invest where we're seeing substantial opportunity and growth.

The PC market is cyclical, and we had some great benefits for a couple of years during the pandemic. And we chose not to spend against that favorability over the past couple of years, and it fell to the bottom line. And you saw substantially increased margins over that time period. And we did that intentionally because it is a cyclical market.

And so, in the same way I see it now, is that PCs are going to be a tough headwind for us for the year. But overall, the Windows app install base, our ability to grow usage, it's still higher than it was. And that's a good opportunity for us. And so, in the same way that we let it fall to the bottom line when we saw a surge, it's important to stay consistent in this down market, because when you have a type of opportunity that we have specifically in the commercial business and the TAMs that Satya talked about as being some of our most exciting, and you have the opportunity with your customers to gain share, to gain confidence, right? And I think it's important to have a steady hand.

Now, let me also say it is not as though we are not responding to the macro environment around cost. As I commented, our sequential headcount growth from Q1 to Q2 will be minimal. It'll be about investing

where we said we would invest, which is in focused areas. It's about moving headcount to make sure, inside the company, we've got it on the highest and most important things. We've added a lot of headcount over the past 12 months, and we want to make sure we use those headcount in the most productive way possible. And we're going to do that.

And also, we're going to, frankly, lap some investments that we've made at the end of H2, Karl. We closed Nuance at the end of Q3. We closed Xander in Q4. When we come and lap those, you will see a material decline in OpEx investment. You will also see us start to lap some of the headcount surges that we made last year in key areas. And by then, I feel good that we'll see productivity improvements from the headcount we have and our focus.

And so, it's the ability to say, absolutely, I want to stay consistent, and we're responding to the macro. It's possible to do both those things, and I think that's what we're doing.

KARL KEIRSTEAD, UBS: Got it. Thank you.

BRETT IVERSEN: Thanks, Karl. Jessi, next question, please.

(Operator Direction.)

BRAD SILLS, Bank of America: Oh, wonderful. Thanks for taking my question. I wanted to ask a question about Office Commercial. A lot of the growth here is driven by subscriber growth, this quarter, for example, 17% constant currency, subscriber growth of 14. Could you remind us where the

incremental subscribers coming from? Could we see that mix of growth shift away from subscribers towards ASP potentially over time? I think you're already over 300 million subscribers, so just any color on just the runway from here. Where is the incremental coming from?

And with all the work that you're doing with E3, E5 and collaboration security analytics, might we see more of the growth coming from ASP versus subscriber growth over time? Thank you so much.

AMY HOOD: Thanks, Brad. It's a good question because you've continued to see the seat growth, I think, for actually much longer than many of the investors had expected. And it really should continue in some ways, because we're focusing on frontline workers scenarios. We're continuing to focus on small and midsize business growth, and we're adding new things to which you can grow, whether that's Viva, whether it's Teams. There's new things that enable us to add relevancy, frankly, and then to add value, and then to add seats.

And so, I don't want to say it has to be, again, this vision of "or." So, I think you'll continue to see lower end seat growth, which is what we've been seeing. And you will see us continue to focus on the value of E5 and the E3 SKU, where we've added some value, making sure we can still move people to that suite as well.

And so, you will see, right, over time, long term, the seat growth move a little bit, and then you'll see ASP show up. And it depends a little bit on mix,

frankly, each quarter. You saw a little more RPU in Q4. You saw a little less in Q1. That had to do with some E3 execution in Q1. But I actually think there's room to do both those things, and I've felt that way now for a couple of years.

BRAD SILLS, Bank of America: Great to hear. Thanks, Amy.

BRETT IVERSEN: Thanks, Brad. Jessi, next question, please.

(Operator Direction.)

GREGG MOSKOWITZ, Mizuho: Okay, thank you. Satya or Amy, as a follow up on Azure, I'm curious how you foresee the magnitude of two different variables on cloud computing demand over that near to medium term, the first being economic pressures on the willingness of some customers to spend, and the second being the impact of the spiking energy cost perhaps as a facilitator for some to do more in the cloud. Do you see these as largely offsetting factors, or are you expecting the former variable to be a lot more prominent than the latter? Thank you.

SATYA NADELLA: Yeah. I mean, the way we see it is overall macro will mean that everybody's going to optimize their build. In fact, as Amy said, our job number one for large swaths of our sort of even customer-facing organizations is to proactively help them optimize. In fact, our incentives in our customer success teams are lined up with them helping customers, quote/unquote, do more with less. So, that's sort of one side.

The thing, though, from a customer perspective, the best way for them to align their spend with what is uncertain demand is to move to the cloud. So, we see the value prop of the cloud. The big winner in all of this will be public cloud, because public cloud helps businesses offset the risk of taking demand risk.

The other side, as you described it, is the risk around supply chain or energy costs. And so, that's another one. The best way to hedge against taking energy cost and be, in fact, more energy efficient is to move to the cloud.

That's where I think a little bit of, as you all think about what happens to cloud, for us, we look at this and say, this is a period where cloud's going to gain share, because we're still in the early innings of adoption. And so, we just want to invest going into it with that mindset and build long-term customer loyalty.

GREGG MOSKOWITZ, Mizuho: Very helpful. Thank you.

BRETT IVERSEN: Thanks, Gregg. Jessi, we have time for one last question.

(Operator Direction.)

BRENT BRACELIN, Piper Sandler: Hi, good afternoon. Thanks for taking the question here. Helpful color on cloud. I wanted to pivot to advertising. This was a segment that crossed over \$10 billion, I think, earlier this year;

Netflix rolling out ad-supported model next year, powered by Microsoft. What is the broader Microsoft advertising ambitions maybe three-to-five years here, given these are very large and very profitable segments that Microsoft has not historically focused on? Thanks.

SATYA NADELLA: No, thanks for the question. Our core advertising business has got two elements to it. One is, I'll call it LinkedIn B2B advertising, where we clearly have a leadership position around both reach, quality of our ROI, and we'll continue. Of course, it will be cyclically impacted, but we feel that the LinkedIn engagement continues to grow. And that is that market comes back. Our premium position with LinkedIn owned and operated, I feel very well positioned and we'll continue to invest in that space.

The second one is the place where we are, again very, very focused on, first starting with our own owned and operated. So when we talk about the overall active devices of Windows having grown by 20% over the pandemic, one of the big opportunities it opens up is for us to take our own owned-and-operated inventory, right, whether it is Bing and Search, whether it's the feed. And those are things that you see some of the growth. We are share takers in the browser. We are share takers in terms of the engagement of the feed. And those are things that we are high leverage on top of the installed base that's now structurally changed in terms of grow.

And then the third party with Netflix, we're really excited about that. And we're going to look to grow at first and make Netflix a successful partner. But we're going to continue to grow our third-party business on the ad platform.

So, those would be the three areas, LinkedIn, our owned-and-operated advertising, both Search and Feed, as well as third-party ad network.

BRETT IVERSEN: Thanks, Brent. That wraps up the Q&A portion of today's earnings call. Thank you for joining us today, and we look forward to speaking with all of you soon.

AMY HOOD: Thank you.

SATYA NADELLA: Thank you very much.

(Operator Direction.)

END
